HOW TO APPLY WATERSLIDE DECAL

Before starting, make sure the area the decal is being applied to is clean of any grease and/or grime.

1. Soak decal in warm water for 20 seconds. Do not over soak. If the decal floats off the paper you will need to get a new decal. Let decal sit for 1 to 4 minutes until the decal freely slides on the backing.
2. Put a drop of water on the headstock right on the area you'll be applying the decal. Do that so you can move the decal freely if needed.
3. Slide the decal directly onto the headstock.
4. Pat dry lightly working from the center out with a damp cloth until all water and air is out from under the decal. "Don't rub" just be gentle.
5. Cover coat is best for longevity but not necessary. Let dry for a day or two if you plan to put on a cover coat.
