

# PHILIP KUBICKI

## Pickup Installation

Notice, each side of the pickup mounting header pin on the preamp, is marked - B for plugging on the Bridge Pickup and N for plugging on the Neck Pickup.

Looking at the lead wires through the clear heat shrink tubing at the plug end, plug the pickups on so the white lead wire (ground) of each pickup is located on the left side (towards neck end) and the black lead wire of each pickup is located on the right side (towards bridge/tuner end).
